LinkedIn — GitHub — LeetCode — Portfolio

Summary

Backend-focused Computer Science student with hands-on experience in Java, Spring Boot, REST API development, and database-driven applications. Experienced in taking software features from requirements and architectural design through implementation, testing, debugging, and product integration. Strong foundation in backend engineering, API security, and database architecture, with growing interests in distributed systems, cloud computing, and scalable software architectures.

Education

Indian Institute of Information Technology Kottayam Aug 2024 – Apr 2028
Bachelor of Technology in Computer Science and Engineering CGPA: 7.77

Experience

Software Engineering Intern Jun 2026 – Aug 2026
Lumenor AI Tech Pvt Ltd (Remote)

- **Designed and developed LumenDesignX**, a 3D rooftop solar design studio, translating product requirements into an end-to-end engineering workflow.
- Took **end-to-end ownership of feature development**, including requirement analysis, technical and architectural decisions, implementation, and iterative improvements.
- Designed and implemented core **solar design workflows and engineering features**, with emphasis on modular architecture, state management, data consistency, and integration with the broader product.
- Participated in **product and technical discussions**, collaborating with the engineering team throughout the SDLC to refine requirements, evaluate implementation approaches, and improve feature stability.

Technical Skills

Languages: Java, SQL, Python
Backend Technologies: Spring Boot, Spring Security, REST APIs, JWT Authentication, Hibernate/JPA
Databases: MySQL, PostgreSQL
Software Engineering: REST API Design, Layered Architecture, SDLC, Object-Oriented Design, Authentication & Authorization
Tools & Platforms: Git, GitHub, Maven, Postman, Thunder Client, Cloudinary
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks

Projects

GreenLeaf Nursery Management System GitHub
Java, Spring Boot, Spring Security, JWT, MySQL, Cloudinary

- Developed a nursery management platform supporting public catalog browsing and secure administrative operations.
- Implemented JWT-based authentication and role-based access control using Spring Security.
- Designed RESTful APIs using layered architecture, DTO patterns, Hibernate/JPA, and MySQL.
- Integrated Cloudinary for secure image upload and cloud-based media management.

NexCart – Secure Product Management System GitHub
Java, Spring Boot, Spring Security, JWT, MySQL

- Built a secure backend system implementing JWT-based authentication and role-based access control.
- Designed REST APIs with role-based authorization for protected resources.
- Implemented stateless authentication using JWT to support secure and scalable API access.
- Developed product and cart management APIs with validation, pagination, and sorting.

RoadWatch AI – Smart Mobility Infrastructure Monitoring System GitHub
Python, Flask, PostgreSQL, REST APIs

- Contributed to the backend and database implementation of a smart road infrastructure monitoring platform.
- Designed and populated PostgreSQL data models for users, authorities, contractors, road projects, complaints, and maintenance records.
- Connected the Flask backend with PostgreSQL and supported REST API-based complaint and infrastructure management workflows.
- Configured and supported cloud deployment using Neon, Render, and Vercel for the application and database.

Problem Solving

- Actively practicing Data Structures and Algorithms to strengthen problem-solving, logical reasoning, and algorithmic thinking.
- Continuously learning and applying new problem-solving techniques through coding practice.
